

Extend the Capabilities of Your Existing IT Investments with VCF Orchestrator™ Plug-ins

Out-Of-The-Box Solutions Automate Server Management, Provisioning, and Configuration Effectively and Efficiently

Discover a family of plug-ins for VCF Orchestrator that simplifies integration and reduces the time needed to manage your physical and virtual servers in a data center throughout their lifecycles, providing you with agile server provisioning and configuration. Save time and frustration by eliminating siloed and disparate communications using multi-vendor orchestration plug-ins.

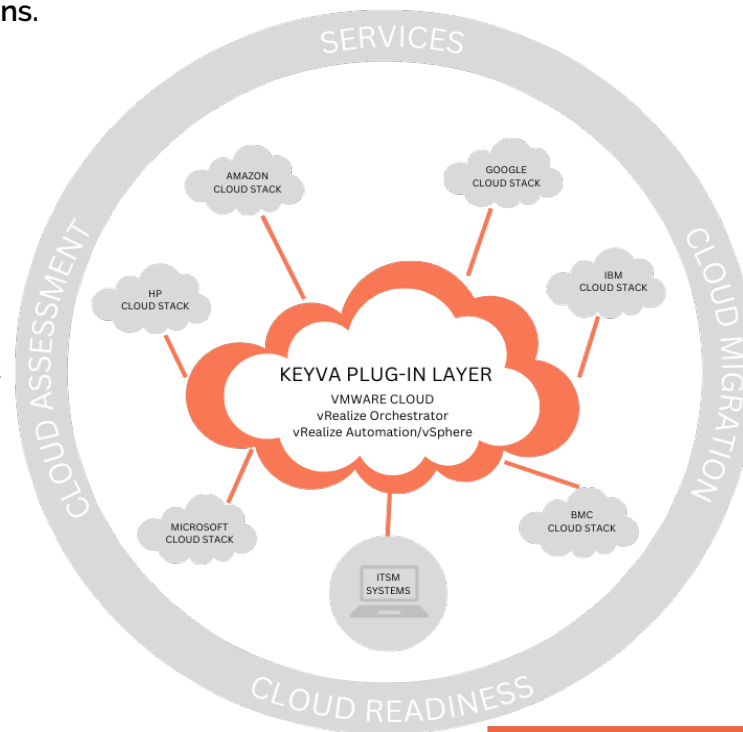

Using Keyva's multi-vendor orchestration plug-ins, you can efficiently and effectively automate servers across your organizational silos and disparate companies or groups. This provides added value to your existing BMC, IBM, OpenText, Google, Amazon, or Microsoft Cloud Stack product investments.

Bringing automation and orchestration to existing infrastructures saves time spent on manual processes and costs associated with user error and inefficiencies while laying the foundation for data center transformation and cloud readiness.

Why Keyva?

Managed services and maintenance contracts to support your product and ensure the highest business value is achieved after implementation.

Out-of-the-box sample workflows to accelerate your time to market with near-immediate investment realization.

30 day trial available for any of Keyva's VMware plug-ins, included with installation, configuration and flow demonstration. With the skills and expertise from over 1000 implementations, Keyva can design and implement a multi-vendor end-to-end automation or cloud solution to provide you with optimal business outcomes that best suit your specific needs.

Keyva's end-to-end solutions offer the right products and services that augment your IT environment. With cross-process integration, interfaces written in other programs and platforms across multiple vendors can each directly communicate with VMware APIs.

ITSM Integration

-  **OpenText Service Manager Plug-in for VCF Orchestrator**
Create OpenText Service Manager help desk tickets and change tickets based on incidents reported from your VMware vCloud suite
-  **OpenText uCMDB Plug-in for VCF Orchestrator**
Bridge the gap between OpenText IT Service Management and VMware Virtualization with cross-process integration
-  **BMC Helix ITSM Plug-in for VCF Orchestrator**
Automatically create and update your VCF Orchestrator change requests and ITSM incidents for Aria from within your BMC Helix suite
-  **BMC Helix CMDB Plug-in for VCF Orchestrator**
Enable process automation and data integration between BMC Helix CMDB and your VMware vCloud suite
-  **ServiceNow Plug-in for VCF Orchestrator**
Enable closed loop ITSM and CMDB integration between your VMware vCloud suite and ServiceNow OpenText

Database as a Service (DBaaS)

-  **OpenText Database and Middleware Automation Plug-in for VCF Orchestrator**
Automate database provisioning and configuration effectively for standalone and clustered application-ready databases

Platform as a Service (PaaS)

-  **OpenText Server Automation Plug-in for VCF Orchestrator**
Enable VMware API communication with OpenText Server Automation while improving the value you get from your OpenText and VMware investments
-  **IBM SoftLayer Automation Plug-in for VCF Orchestrator**
Accelerate your server provisioning process with the ability to manage, command, control, check status and execute workflows with IBM
-  **BMC TrueSight Automation for Servers Plug-in for VCF Orchestrator**
Cross-process integration and communication between TrueSight and VMware interfaces across organizational silos
-  **Google Cloud Platform Plug-in for VCF Orchestrator**
Automate public cloud management, provisioning and configuration effectively and efficiently

Orchestration as a Service (OaaS)

-  **OpenText Operations Orchestration Plug-in for VCF Orchestrator**
Automate multi-domain processes effectively and efficiently with the bi-directional plug-in for OpenText Operations Orchestrator VMware Aria
-  **VCF Orchestrator Integration Pack for Microsoft System Center 2012 Orchestrator**
Extend Microsoft's workflow management solution for VMware virtualization
